

$$\zeta_{6N}(s) = \zeta(s)(1 - 2^{-s})(1 - 3^{-s}): \text{structural ladders } (\beta = 0) \text{ and } \zeta \text{ zeros } (\beta = \tfrac{1}{2})$$

(A) zero map (upper half-plane)

(B) the 2- and 3-power staircases stripped from ψ ; their Fourier modes $= L_2, L_3$
